## 1 Introduction

Cryptocurrencies have gained a significant amount of popularity in recent years, with more and more people investing in them. However, the complex technical terms and concepts that accompany cryptocurrencies can be daunting for newcomers. One such concept is the distribution of *PEPE* tokens for *PP* holders. This whitepaper aims to provide a comprehensive understanding of this distribution process and how it can benefit investors.

## 2 What are *PP* and *PEPE* Tokens?

*PP* is a cryptocurrency that has gained popularity in the past few thousand blocks. It operates on a decentralized network and is used for a wide range of purposes. One of the unique features of *PP* is its ability to distribute *PEPE* tokens to *PP* holders.

*PEPE* tokens are ERC20 tokens that are distributed to *PP* holders. These tokens can be traded on various exchanges, and their value can fluctuate depending on the market conditions. *PEPE* tokens are named after the popular meme, Pepe the Frog, and have gained a significant following in the cryptocurrency community.

## 3 How are *PEPE* Tokens Distributed to *PP* Holders?

The *PP* contract has a designated wallet address titled "Distributor" that accumulates *PEPE* tokens through taxes on buying and selling of *PP*. These tokens are automatically distributed based on a few

parameters. Every time an individual holder transacts with *PP*, whether by buying, selling, or transferring any amount, the *PEPE* tokens are distributed proportionally based on the amount of *PP* held.

There is a 9% tax on each buy and sell transaction on *PP*. Of the 9%:

- 4.5% in *PEPE* reflections
- 4.5% for marketing and development

The distribution process has been designed to be simple and user-friendly. The developers of *PP* have created a DApp, available at <http://printer.printthepepe.com>, which allows holders to interact with function 4 on the contract backend, the CLAIM function. The CLAIM function prompts the Distributor to release tokens to the holders, allowing them to claim their rewards.

### 3.1 Factors Affecting the Distribution of *PEPE* Tokens

There are several factors that can affect the distribution of *PEPE* tokens to *PP* holders. These factors include the amount of *PP* held by an individual, the frequency of transactions, and the total amount of *PP* held by all investors.

The amount of *PP* held by an individual is a key factor in determining the amount of *PEPE* tokens they receive. The more *PP* a holder has, the more *PEPE* tokens they are eligible to receive. Additionally, the frequency of transactions can also affect the distribution of *PEPE* tokens. Holders who transact more frequently are likely to receive more *PEPE* tokens than those who transact less frequently.

Finally, the total amount of *PP* held by all investors can also affect the distribution of *PEPE* tokens. If there are a large number of *PP* holders, the distribution of *PEPE* tokens may be more spread out, resulting in smaller amounts being distributed to each individual holder.

### 3.2 Automatic Distribution vs. Manual Claims

The distribution of *PEPE* tokens can be done automatically or through manual claims. Automatic distribution is done through the *PP* contract, which distributes *PEPE* tokens based on the parameters mentioned above.

Manual claims, on the other hand, require holders to actively claim their rewards using the front-end DApp created by the *PP* developers. This process is simple and requires holders to interact with function 4 on the contract backend, the CLAIM function. This prompts the Distributor to release tokens to the holders, allowing them to claim their rewards.

The claims process for *PEPE* tokens has been simplified to allow holders to manually receive dividends without having to make any changes to their existing holdings. This means that holders can claim their rewards without having to sell or transfer their *PP* holdings.

## 4 Benefits of *PEPE* Distribution

The distribution of *PEPE* tokens for *PP* holders provides a unique opportunity for investors to potentially reap the benefits of holding *PP*. By understanding the distribution process and the potential rewards, investors can make informed decisions about their *PP* investments.

### 4.1 Passive Income

One of the key benefits of *PEPE* distribution is the ability to earn passive income. Holders of *PP* can earn *PEPE* tokens simply by holding *PP* and transacting with it. This can provide a steady stream of income for investors who are willing to hold onto *PP* for an extended period.

Passive income can be particularly appealing to investors who are looking for a low-risk, long-term investment strategy. By earning *PEPE* tokens through the distribution process, investors can potentially generate a consistent income stream without having to actively manage their investments.

## 4.2 Increase in the Value of *PEPE* Tokens

Another benefit of *PEPE* distribution is the potential increase in the value of *PEPE* tokens. As more people invest in *PP* and transact with it, the demand for *PEPE* tokens will increase, potentially leading to an increase in their value.

The value of *PEPE* tokens can be affected by various market conditions, including supply and demand, market sentiment, and investor behavior. However, by understanding the potential factors that can affect the value of *PEPE* tokens, investors can make informed decisions about their investments and potentially benefit from any increases in value.

## 4.3 Increase in the Value of *PP*

Additionally, the distribution of *PEPE* tokens can also help to increase the overall value of *PP*. By providing an incentive for investors to hold onto *PP*, the distribution of *PEPE* tokens can help to increase demand for *PP*, which can ultimately lead to an increase in its value.

This can be particularly beneficial for long-term investors who are looking for a stable, profitable investment strategy. By holding onto *PP* and earning *PEPE* tokens through the distribution process, investors can potentially benefit from any increases in the value of *PP*.

Figure 2: A jest at the state of finance

## 4.4 Creation of an Engaged Community

The distribution of *PEPE* tokens can also help to create a more engaged community around *PP*. By incentivizing holders to transact with *PP* and claim their rewards, the distribution of *PEPE* tokens can help to create a more active and engaged community of investors who are interested in the success of *PP*.

An engaged community can be beneficial for investors in several ways. For example, an engaged community can help to increase demand for *PP*, which can ultimately lead to an increase in its value. Additionally, an engaged community can provide investors with valuable insights and information about *PP*, helping them to make more informed investment decisions.

## 4.5 Creation of Loyalty

Finally, the distribution of *PEPE* tokens can also help to create a sense of loyalty among *PP* holders. By providing an incentive for investors to hold onto *PP* and transact with it, the distribution of *PEPE* tokens can help to create a sense of loyalty among investors, which can ultimately lead to a more stable and successful cryptocurrency.

Loyalty among investors can be particularly beneficial for the long-term success of *PP*. By creating a loyal community of investors who are committed to the success of *PP*, the cryptocurrency can potentially benefit from more stable demand and support, which can help to mitigate volatility in the market.

## 5 Conclusion

In conclusion, the distribution of *PEPE* tokens for *PP* holders is a straightforward process that allows individuals to earn tokens by simply holding *PP* and transacting with it. Those who wish to claim rewards manually can do so by using the front-end DApp created by the *PP* developers. By understanding this distribution process and the potential benefits it can provide, investors can make informed decisions about their *PP* investments and potentially reap the rewards of *PEPE* distribution.

Overall, the distribution of *PEPE* tokens for *PP* holders provides a unique opportunity for investors to earn passive income, increase the value of their investments, and help create a more engaged and loyal community around *PP*. The potential benefits of *PEPE* distribution include the ability to earn passive income, the potential increase in the value of *PEPE* tokens, the increase in the value of *PP*, the creation of an engaged community, and the creation of loyalty among investors.

By understanding these potential benefits, investors can make informed decisions about their *PP* investments and potentially reap the rewards of *PEPE* distribution.
